

Aftercare Instructions

TubandTile@gmail.com

(615) 469-0756

The first week after refinishing: After the refinishing process is complete, you must wait 24 hours before using the tub to allow the surface to fully cure. For the first 7 days after resurfacing, refrain from filling the tub with water or cleaning the tub with any type of cleaning product or solution, as this can affect the curing process. You may notice some roughness that was caused by dust particles during the refinishing process. Don't worry, as this roughness will subside after normal use and cleaning of the tub.

Cleaning Supplies and Instructions: Use only non-abrasive cleaners and non-abrasive scrubbing pads. Do not use bleach or products containing bleach. Stay away from powders or soft scrub gels, as they can deteriorate and dull the surface (e.g. Comet, Ajax, Soft Scrub). Products that are oil or wax-based, such as Pinesol, can leave a waxy residue or dull your finish as well. Other products to avoid include, but are not limited to: Mr. Clean Magic Erasers, hard bristle brushes, **Liquid cleaners and soft cloths or sponges are best. We suggest these products: Blue Scotch-Brite (non-scratch) pads; Zep- Shower, Tub, and Tile Cleaner; 409; Lysol Tub & Tile cleaner; Scrubbing Bubbles; or a DIY mixture of vinegar & water.** PLEASE THOROUGHLY RINSE THE TUB WITH WATER AFTER USING A CLEANER. Using a detachable showerhead to rinse down shower after each use is an easy way to keep the tub clean in-between cleanings.

Other Tub Cleaning and Maintenance Tips

- Check periodically for leaking or dripping plumbing, as this can have a negative effect on your new surface over time.
- Excessive soap scum can eat away at your new surface over time. Be sure to clean your tub regularly to prevent buildup. Simply using an extendable shower head to spray down your shower after every use is an easy way to keep your shower clean in between cleanings. Make sure to lift shampoo & soap bottles and spray under them as well.
- Using your bathroom exhaust fan while showering can help prevent mold from forming along the new caulk lines in your tub.
- Prevent standing or pooling water for extended periods of time, as this can erode the finish and will void your warranty.

***Please reference warranty to review conditions that will void your warranty**
